

XTRA-LOK

ROLLER DOOR SECURITY LATCH

(Designed and Made in Australia)

(Padlocks not included in kit)

PURPOSE:

To help prevent levering, and force to the door in or out, (as in a ram-raid situation) Also of great assistance in strong winds.

TECHNIQUE:

Secures the door to the concrete with a simple latching technique taking seconds. Sits flat with absolute minimum obstruction when the door is open.

OPTIONS:

Can be fitted to roller, tilt or other types of doors, either singularly in the centre, or in multiples.

CONSTRUCTION:

Solid zinc treated steel, with 304 grade stainless steel hinge pin for strength and durability.

Supplied with four hardened tamperproof fasteners, complete with cup head bolts.

MODELS:

There are two internal locking models available, in addition to the unique external version, to cover all applications.

Available From

Model 1A For Flat Concrete

Model 2A For Rebated Concrete

External Kit

Double Installation
